

This Dog Park will be

CLOSED

for blackberry spraying

MONDAY AUGUST 9th

After Monday, enter at your own risk.

PRODUCT: T-ZONE™ EPA REG. NO. 2217-920

Recommendations

Post-emergent broadleaf weed control in home lawns, golf courses, parks, commercial property, schools, sod farms, roadsides and cemeteries, especially where rapid visual results are an advantage.

Provides exceptional broadleaf weed control in cool-season turfgrasses. T-Zone contains four active ingredients including triclopyr ("T"), a proven ingredient for hard-to-control weeds.

Energized with sulfentrazone ("ZONE"), T-Zone is fast-acting with visible activity in hours. Weed death can occur within 7 to 14 days. Sulfentrazone, a protox inhibitor, works by preventing a key enzyme required for chlorophyll production.

Tests have consistently shown control of tough weeds like wild violet, ground ivy, black medic, oxalis, clover, spurge, speedwell and lespedeza. The oil-based formula cuts through the cuticle of the toughest weeds.

Hard-working triclopyr, when combined with fast-acting sulfentrazone and precise ratios of 2,4-D and dicamba, provides premium weed control. T-Zone affects multiple sites within broadleaf weeds with symptoms including rapid leaf and stem curl, twisting, yellowing and browning. As a bonus, the sulfentrazone provides suppression of young and actively growing yellow nutsedge.

T-Zone opens up more application opportunities than most herbicide products. Improved cool-weather performance allows applications earlier and later in the growing season. Rain-fast in as little as 3 hours, there is less concern about weather interference.

Add T-Zone to your tank and members or clients will see the fast results, reducing the number of complaints or call backs. T-Zone has a CAUTION signal word. A low-odor formulation, T-Zone can be applied without raising unnecessary concerns over pesticide applications.

Please research this product. If you have concerns about this product and the safety of your pet, refrain from using this site.
